

70R

High viscosity index DOT 4 brake fluid

USES

This fluid is suitable for disc and drum brakes, as well as for most clutch systems.

It is suitable for use in severe service conditions (where disc brakes reach high temperatures).

Specifications:

FMVSS 116 DOT 4
SAE J1703 / J1704
ISO 4925 Class 4

MAIN PHYSICAL DATA

		Units	Values
Density at	20°C	kg/m ³	1060
Kinematic viscosity at	40°C	mm ² /s	8
Colour			Yellow
Boiling point (dry)		°C	265
Viscosity at	-40°C	mm ² /s	1400

The data given in this table represents typical production values and should not be taken as specifications.

PROPERTIES & ADVANTAGES

- ▶ High boiling point, preventing the formation of vapour locks in the system when the brakes are used intensively.
- ▶ Miscible with DOT 4 and DOT 3 brake fluids.
- ▶ Non-aggressive to seals.
- ▶ High anti-corrosion properties meeting the most stringent requirements.

PRECAUTIONS FOR USE

DO NOT USE in circuits for which a mineral hydraulic fluid or a silicone brake fluid (DOT 5 standard) is recommended.

Carefully read the label and follow the MSDS instructions.
Corrosive to car paint, avoid any contact.
